Customer Reviews

All of the "Number Power" books are really good. As a special education teacher, these books were used as supplements to my other texts. They're a great source for practice, and practice and practice. Additionally, the lessons are well explained and often used as a stand alone lesson.

My 23-yr old autistic step son loves these books. They are a very good way for him to spend a portion of his day. The books are well written and the problem selections are very very good. The problems begin quite easy which provides him confidence with the specific math skill. The problems progress in difficulty as one continues. It is also handy to have the answers in the back of the book, which I use for grading his work. Thanks, MLH

I purchased this book to aid me in tutoring adults who are studying for their GED tests. It is an

excellent resource. Very easily read/understood by my students. Highly recommended!

I am enjoying my book. It is a blessing. I started working in it. I couldn't wait till I started school.

Thanx

I love my Number Power books they are easy to understand, by giving clear examples. I love that they put ALL the answers in the back of the book. I also, love that they do not use common core.

The Number Power Series are the clearest, most concise math books I've found in my 20 years of teaching adult education.

Great book. Helped me alot with my math. I would recommend this book to anyone struggling with math to try it.
