Go To College For Free: College Planning ABC's Guide To Finding Scholarships, Financial Aid And Free Tuition Awards For College

Synopsis

Manuel Fabriquier is recognized as a leading authority on college planning and finance. He has a proven track record for saving families thousands of dollars off tuition while successfully matching students with the right college. He knows how to package students for admissions to earn the awards they deserve. In other words, he knows where and how to find the money, so if you are totally serious about a no-fluff, honest, and strategic approach to college planning, admissions and funding, then you'll find this guide to be a valuable asset and priceless resource in the process. Inside, Manuel discusses a variety of stellar strategies that have helped his clients navigate the maze of the "business of college," and understand its complicated financial system. He shares his vast knowledge so you will gain a new perspective about the process, and learn valuable tips to help lower costs, reduce your expected family contribution or even find free money for college through a variety of awards you may never knew existed. It's a must-read guide for any parent and college bound teen.

Customer Reviews

I read an article in the Wall Street Journal about how to fund college, There are many variables in my situation inasmuch as I am going to pay tuition for my niece. There are a number of ways to do this without interfering with financial i.e., aid she may receive based upon her parents earnings and investments. I could gift money to her, I could pay student loans for her or I could pay tuition directly. However, if a family member pays tuition for a grandchild or niece/nephew, the money has to go into the parents income for purposes of financial aid. I think this book did a good job of explaining most

of these options. It had some great questions for campus tours or on campus interviews. My only true criticism is that I'm not sure it did enough to explain how the FAFSA (Free Application for Federal Student Aid) application/form works. Otherwise, book is very well written and an easy read. I'm a slow reader and was able to finish it in one night.

The book is not well written at all. The author sounds like a nice guy who probably has helped lots of families in California get into college but we have just started looking into financial aid and we learned nothing new from this book.

I'm a high school teacher and I've placed this book in my class for students to look through on their free time. Majority of my students feel they can't afford college and have already made up their minds to go straight into the workforce after high school. But after my students looked through this book, they've given college a second thought. Every parent should buy this book if they plan to send their child to college. It has vital information about financial aid, scholarships, factors to consider when picking a college. What I really liked about the book is the A-G requirements to get into college and the timeline of what the kids need to be doing their Junior and Senior year. I have students who barely start planning around November when applications are due. It's disappointing that a lot of my students have no idea of what classes to take in high school to make it into a 4 year university. If the students don't know, parents have no idea either. As a parent, this book has already laid the foundation for you. Don't rely on the counselors at the school. Do your homework! Unfortunately, there are a lot of students who are misinformed by their own school counselor. If you know what's best for your child you need to be an advocate for them and use the information in this book to make sure child is on the right path to success. I highly recommend!

So many things that we didn't know about the college planning process. Really appreciate this book as a guide to all of the things that we didn't know ...we didn't know. Now to dig in and get ready.

Agreed whole with the review titled "Not really Step by Step". Just attended one of his free 1.5-hour seminars on this matter and felt it a totally waste of time. Also skimmed his book at the seminar, and found nothing in the book helpful as I already knew from webs more than what's in the book or his seminar.
